

Young Adult Addiction Program

Talbott Recovery's Young Adult Program provides comprehensive treatment of addiction (alcoholism, drug use and other addictive disorders) along with its attendant related medical, psychological, psychiatric, spiritual and work-related problems. It is generally agreed that young adults who suffer from addiction have more difficulty achieving sobriety than their adult counterparts. The Talbott Recovery Young Adult Program was designed to address that difficulty. Our young adults (men and women who are approximately 18-25 years old) have a deftly crafted program of their own at Talbott Recovery. Our therapy, focusing on substance abuse in young adults, uses special groups and therapeutic techniques to address the challenges of this age.

Young Adult Program

A place of new beginnings

Young Adult Program

We Address the Whole Patient

Who We Treat

Talbott Recovery accepts patients with a dual-diagnosis, such as addiction with a co-existing depression, unresolved grief, personality problems, etc. All of our patients have a chemical abuse problem, but we address the whole patient in his/her disease. We screen the health status of all potential patients to make sure we are the proper facility for care. This usually involves a review of any medical history and records by a member of the medical staff at Talbott Recovery, and an admissions screening assessment with our Intake Department.

Treatment Issues in Young Adults

Recent studies indicate that young adults with addictive disorders are seldom addicted to just one substance or behavior. They are experiencing significant life changes, and are subject to high levels of peer pressure. At Talbott Recovery, we understand the importance of flexibility in meeting the therapeutic needs of our young adult population as they are learning to navigate their constantly changing social environment. To prepare patients to meet these challenges, our substance abuse therapy for young adults offers an integrated continuum of care for individuals with addictive or dual diagnosis disorders. The Talbott Recovery approach to treating addictive disease and its accompanying emotional and physical problems is both comprehensive and individualized. Patients and their families participate in psychoeducational and psychotherapeutic groups designed to help them explore addiction and dual disorders, as well as the impact these diseases can have on the family. After more than 35 years of treating chemically dependent patients, Talbott Recovery's treatment philosophy is built around our belief that addiction is a

Talbott Recovery

Young Adults Face Specific Issues

primary drive that must be managed through education, cognitive restructuring and emotive therapies. While living in Talbott Recovery's structured environment, patients begin to experience a life free from active addiction. As patients move through progressive levels of care, each comprising a broad spectrum of specialty groups and services, they also actively participate in 12-Step recovery programs. Each of these elements helps the patient unearth the issues that drive his/her substance use and/or addiction, allowing him/her to learn how to halt the addictive response.

It is essential to recovery for patients to identify the underlying issues that tend to drive the disease of substance use and/or addiction.

As young adults begin to recover from the shame that surrounds their illness, they can learn how to relate to self and others. This process gives patients an opportunity to develop healthy coping mechanisms and socialization skills necessary to maintain abstinence. Upon completion of the Young Adult Addiction program at Talbott Recovery, patients are more prepared to face life's challenges substance free.

Levels of Care

We stage the intensity of treatment for substance abuse in young adults based upon the levels described by the American Society of Addiction Medicine Patient Placement Criteria, Version II, Revised.

Detoxification & Stabilization

Inpatient stabilization is available for patients requiring a more complicated detoxification and/or behavioral containment to interrupt the downhill spiral of his/her addiction. Patients requiring this level of care are admitted to our sister facility, Anchor Hospital, which sits on the same campus as Talbott Recovery.

Young Adult Program

Program is Crafted for Men and Women

Partial Hospitalization Program (PHP with Recovery Residence)

Following admission or transfer from detox and stabilization, each patient undergoes a thorough evaluation if he/she has not obtained an evaluation previously. The evaluation assesses the patient's physical, psychiatric, psychological, social, spiritual, and family needs to determine the most appropriate level of care.

Mirror Image (with Recovery Residence)

After completing the partial hospitalization phase of treatment, patients may transition to the Talbott Recovery Mirror Image phase. Housing is provided either in our campus housing or through our Transitional Living Program.

Length of Stay

The length of stay will be determined by the patient's treatment requirements and progress through substance abuse treatment. The minimum length of stay in the primary phase of treatment is generally 90 days.

Insurance for Substance Abuse Treatment

Please call the Talbott Recovery Intake Department (800) 445-4232 and speak with one of our specialists who will assist you to get the best utilization of any available insurance benefits.

Staff

Our programs are facilitated by licensed master's level therapists and Board Certified Psychiatrists with expertise in treating addiction and associated psychological problems.

Young Adult Program Information

Young Adult Program Description:

Talbott Recovery Campus' (TRC) Young Adult Program provides comprehensive treatment of addiction (alcoholism and other drug use disorders and other addictive disorders) and its attendant related medical, psychological, psychiatric, spiritual and work-related problems. It is generally agreed that young adults who suffer from addiction have more difficulty achieving sobriety than their adult counterparts. The Talbott Recovery Campus Young Adult Program was designed to address that difficulty. Our young adults (men and women who are approximately 18 to 26 years old) have a deftly crafted program of their own at TRC. The program uses special groups and therapeutic techniques to address the challenges of this age.

Who we treat:

TRC accepts patients with a dual-diagnosis, such as addiction with a concomitant depression, anxiety, unresolved grief, personality problems, etc. All of our patients have a chemical abuse problem, but we address the whole patient in his/her disease. We screen the health status of all potential patients to make sure we are the proper facility for care. This usually involves a review of any medical history and records by a member of the medical staff at TRC, and an intake screening assessment with our intake department.

Insurance:

Please call the TRC Intake Department (800.445.4232) and speak with one of our specialists who will assist you to get the best utilization of any available insurance benefits.

Levels of Care:

We stage the intensity of treatment based upon the levels described by the American Society of Addiction Medicine [Patient Placement Criteria](#), Version II, Revised.

Detoxification & Stabilization

Inpatient stabilization is available for patients requiring a more complicated detoxification and/or behavioral containment to interrupt the downhill spiral of his/her addiction.

Partial Hospitalization Program (PHP with boarding)

Following admission or transfer from detox and stabilization, each patient undergoes a thorough evaluation if he/she has not obtained an evaluation previously. The evaluation assesses the patient's physical, psychiatric, psychological, social, spiritual, and family needs to determine the most appropriate level of care.

Intensive Outpatient Program (IOP with boarding)

After completing the partial hospitalization phase of treatment, patients are transitioned to TRC's Mirror Image phase (see Treatment Elements). Extended Mirror Image may be recommended for patients when indicated.

Intensive Outpatient Program (IOP)

IOP maybe recommended for some patients following their treatment in residence at TRC's campus. In this phase of treatment patients may live at home or at a halfway or 34/ house depending on the patient's individual treatment requirements.

Length of Stay at TRC

A patient's length of stay will be determined by the patient's treatment requirements and the patient's progress through treatment. The minimum length of stay in the primary phase of treatment in the Young Adult Program is 12 weeks.

Young Adult Treatment Issues:

Recent studies indicate that young adults with addictive disorders are seldom addicted to just one substance or behavior. They are experiencing significant life changes, and are subject to high levels of peer pressure. At TRC we understand the importance of flexibility in meeting the therapeutic needs of our young adult population as they are learning to navigate their constantly changing social environment.

To prepare patients to meet these challenges, the Young Adult Program offers an integrated continuum of care for individuals with addictive or dual diagnosis disorders. TRC's approach to treating addictive disease and its accompanying emotional and physical problems is both comprehensive and individualized. Patients and their families participate in psychoeducational and psychotherapeutic groups designed to help them explore addiction and dual disorders as well as the impact these diseases can have on the family.

After thirty years of treating chemically dependent patients, TRC's treatment philosophy is built around our belief that addiction is a primary drive that must be managed through education, cognitive restructuring and emotive therapies. While living in TRC's structured environment, patients begin to experience a life free from active addiction. As patients move through progressive levels of care, each comprising a broad spectrum of specialty groups and services, they also actively participate in 12-Step recovery programs. Each of these elements helps the patient unearth the issues that drive his/her addiction and learn how to halt the addictive response.

It is essential to recovery for patients to identify the underlying issues that tend to drive the disease of addiction. As young adults begin to recover from the shame that surrounds their illness, they can learn how to relate to self and others. This process gives patients an opportunity to develop healthy coping mechanisms and socialization skills necessary to maintain abstinence. Upon completion of treatment at TRC, young adults are more prepared to face life's challenges substance free.

Continuity of Care:

Talbott Recovery Campus (TRC) offers an array of services and levels of care. Each level of care addresses the needs of our patients during different times in their treatment. We stage the intensity of treatment based upon the levels described by the American Society of Addiction Medicine [Patient Placement Criteria](#), Version II, Revised.

Patient Assessments

Each patient undergoes a thorough evaluation if they have not obtained an evaluation previously. If clinically indicated, prior to admission a 96 Hour Assessment may be recommended to help facilitate decision making by prospective patients, family members and referents. The evaluation assesses the patient's physical, psychiatric, psychological, social, spiritual, and family needs to determine the most appropriate level of care. The multi-disciplinary assessment team includes:

- Attending Physician
- Psychiatrist
- Clinical Psychologist
- Internal Medicine Specialist
- Addiction Medicine Specialist
- Assessment Coordinator

The team may also include a pain specialist, a neurologist, a behavioral medicine specialist or a sexual boundaries specialist as needed. An fifth day may be required for any additional evaluations that may be required.

Each Assessment includes:

- Internal medicine evaluation / physical exam
- Psychiatric evaluation
- Addiction medicine evaluations
- Bio-psychosocial self-assessment
- Laboratory work and drug screens
- Comprehensive psychological testing
- Extensive neuropsychological testing

Treatment Planning

During the assessment process, members of TRC's staff (with patient approval) will contact family members, friends, healthcare providers and referents to collect key collateral data for integration into the patient's treatment plan. In our experience, patients (including those presenting with psychiatric co-morbidity) respond better to treatment,

medications and recovery when every aspect of their lives has been addressed in the development of their treatment plan.

Upon completion of a patient's assessment, the treatment team, led by the attending physician, develops an individual treatment plan for each patient and meets regularly to review each patient's progress and to update treatment goals. The clinical case manager works closely with each patient, Family Counselor and the family to ensure the treatment plan is meeting the patient's changing needs. Soon after treatment begins, the patient's continuing care coordinator will begin the process of identifying a patient's discharge needs.

Treatment Modalities

Group therapy is the cornerstone of change in all of our programs; we believe recovery cannot occur alone. The Young Adult Program utilizes many of the following therapeutic techniques:

- Group therapy
- Medication management of mood disorders
- Individual therapy
- Procedural learning on how to use the 12-Steps
- Psychoeducation group
- Impaired professionals issues group
- Profession-specific groups
- Life skills
- Spirituality group
- Family therapy
- Family Program
- 12-Step recovery meetings on campus
- Relapse prevention
- Gender issues group
- Sexual Issues (Male / Female)
- Grief Group
- EMDR (Eye movement desensitization and reprocessing) for trauma issues
- Meditation and mindfulness training

Family Program

The Family Services Department at TRC provides patients and families support and education on the disease of addiction, cross addiction and the impact on the family. The Family Program is designed to assess the family's needs, educate about chemical dependence and offers ongoing family support during and/or after the patient's treatment. The family program is the first step many addicted families make towards healing. Once a patient is admitted to TRC, a family counselor is assigned to respond to any questions or concerns. That family therapist works both at a distance and close up with our families when they attend the family program.

The family program consists of approximately five family sessions and a family workshop during treatment. The family workshop is a four-day educational and supportive experience. The workshop provides education on the disease of addiction and cross addiction and offers an opportunity to address questions and concerns. For more details about the Family Program and a sample schedule, please click here to visit the [Family Program](#) section of this website.

Continuing Care

Talbott Recovery Campus is committed to helping our patients and their families build a long term, self-sustaining recovery. TRC's continuing care process assists patients and families develop a program of recovery and a support system that will provide a solid foundation to achieve that goal after they leave our facility.

At Talbott, we believe that continuing care actually begins prior to the patient arriving for treatment. Whoever refers a particular patient to TRC becomes the starting point for communication with our treatment team and continuing care coordinator. This begins a process of communication that our coordinators build on throughout the course of treatment. Each patient is assigned a continuing care coordinator that will work with them throughout the treatment course to:

1. Serve as the referent liaison with our referral sources and the clinical treatment team
2. Gather collateral information and provide written and verbal updates to referents
3. Assist the patient with any work, licensure or legal issues
4. Participate in the multi-disciplinary treatment team to assess patient's progress
5. Identify unresolved treatment issues to be included in discharge planning
6. Plan Extended Therapeutic Leaves (ETL) for the patients prior to discharge
7. Establish a clinical team to assist with patient's long term recovery post-discharge

Mirror Image Treatment

Mirror Image is an addiction treatment innovation created and first implemented by TRC founder, Dr. Douglas Talbott. Mornings, three days a week TRC Mirror Image patients go to other treatment facilities in the Atlanta area and work with newly admitted alcoholics and addicts at that facility. The purpose is to assist TRC patients to overcome the myopia that often accompanies the disease of addiction - patients can see the affects of the disease of addiction in others but are unable to see those same affects in themselves. Patients consistently report that their experience in Mirror Image has a profound affect on their recoveries. Mirror Image patients return to TRC for afternoon groups and appointments with physicians and clinicians.

Intensive Outpatient Program (IOP)

IOP maybe recommended for Young Adult patients some patients following completion of their initial phase of treatment or upon completion of the Mirror Image phase of treatment at TRC's campus. In this phase of treatment Young adult patients do not live in TRC residences. Patients may live at home or at a halfway or 34/ house (non TRC facility) depending on the patient's individual treatment requirements.

Return Visit

Almost fifteen years ago, the leadership at Talbott Recovery Campus, working together with former patients, developed the return visit program. Alumni spoke of the significant number of important new friendships they had made with other patients while at TRC. These alumni spoke of the confidence and trust they had developed with TRC staff. And mostly, they spoke of how they wanted to “reconnect” with friends on a regular basis. Responding to this feedback, TRC leadership developed our Return Visit program. Since then, Return Visit has become an important and well-attended component of the programs offered by Talbott Recovery Campus.

Return Visit is:

- A time to come back to TRC to help “recharge recovery batteries”
- A time to meet and “catch up with” old roommates and “domemates”
- A time to “reconnect” with TRC staff who have been important to the patient and to his/her recovery
- A time to remember and recommit to the foundation for recovery they began to build for themselves while in treatment
- A time to offer hope and encouragement and support to current TRC patients

Patients are encouraged to plan their recovery around revisits to the TRC campus. We have learned that the patients who take the time to return to us have a markedly increased recovery rate. Addiction is a disease that we forget we have. The recovery visits remind us to tend to ourselves and our recovery program.

Frequently Asked Questions

1. What age patients would be assigned to the Young Adult Program?
A: Generally patients 18 – 25 will be assigned to the Young Adult Program; however, final decisions on program assignment will be based on individual patient treatment requirements.
2. What will be the Average Length of Stay (LOS)?
A: 12 weeks is the average LOS but each patient’s actual length of stay will be determined by that patient’s treatment requirements and progress through treatment. Inpatient detox and assessment and/or stabilization are not included in that 12 weeks.
3. What is the cost for the Young Adult Program?
A: The cost of treatment will vary with each patient’s length of stay (LOS) and individual treatment requirements. Please call the TRC Intake Department (800.445.4232) and speak with one of specialists who will help you to determine the costs for your patient.
4. Do you accept insurance?

A: Please call the TRC Intake Department (800.445.4232) and speak with one of specialists who will assist you to get the best utilization of any available insurance benefits.

5. What are the levels of treatment offered?

A: Detoxification & Stabilization, Partial Hospitalization (PHP – Campus Treatment), Intensive Outpatient. After completing PHP, several options will be considered including: Mirror Image, Intensive Outpatient (IOP) and ¾ House (non-TRC / outside facility)

6. Do you offer assessments?

A: Yes - Upon admission, each patient undergoes a thorough evaluation to determine the patient's physical, psychological, social, spiritual, and family needs. If clinically indicated, a 96 Hour Assessment may be recommended to help facilitate decision making by prospective patients, family members and referents.

7. What types of young adults are appropriate for treatment at TRC?

A TRC's Adult Program provides comprehensive treatment of addiction (alcoholism and other drug use disorders and other addictive disorders) and its attendant related medical, psychological, psychiatric, spiritual and work-related problems.

TRC accepts patients with a multiple disease states, such as addiction with a concomitant depression, unresolved grief, personality problems, etc. All of our patients have a chemical abuse problem, but we address the whole patient in their disease. We screen the health status of all potential the patients to make sure we are the proper facility for care. This usually involves a review of any medical history and records by a member of the medical staff at TRC, and an intake screening assessment with our intake department.

8. What types of Young Adults are not appropriate for TRC?

A: Patients with a primary psychiatric diagnosis, who are suicidal, with medical conditions that require inpatient care or patients with behavioral problems such as violence or flight risk.

9. What makes TRC's Young Adult Program different from programs at other treatment centers?

A:

- Age specific treatment to meet young adults (18-25 yrs) unique challenges
- Separate program designed to specifically meet the treatment requirements and discharge challenges of 18-25 year olds.
- Dedicated clinical staff
- Low patient to staff ratio
- Six full time physicians on staff (all addiction medication specialists including 3 psychiatrists)
- Family Program & Workshop

- Extended Therapeutic Leaves
- Return Visit Program

10. Why would my child/young adult be successful in your program when they haven't been successful at getting clean and sober at other programs?

A: Paul H. Earley – TRC Medical Director

“Short term treatment of addiction is like throwing seeds into the ground and hoping they take root. Intermediate care, such as that provided by the Talbott Recovery Campus treats the personality, because the personality is the soil in which recovery is planted. Our job is to tend that soil; to make a patient’s personality fertile so that recovery will grow deep roots and recovery blossoms.”

“Recent studies indicate that young adults with addictive disorders are seldom addicted to just one substance or behavior. They are experiencing significant life changes, and are subject to high levels of peer pressure. At TRC we understand the importance of flexibility in meeting the therapeutic needs of our young adult population as they are learning to navigate their constantly changing social environment.”

Michael Fishman, M.D. – TRC Director of Young Adult Program

- Age specific treatment to meet young adults (18-25 yrs) unique challenges
- Separate program designed to specifically meet the treatment requirements and
- Post discharge challenges of 18-25 year olds.
- Dedicated clinical staff
- Low patient to staff ratio
- Return Visit Program

11. If I am in school currently what will happen if I enter into the program?

A: You can apply for a Medical Leave of Absence. Once a release has been signed TRC can send a letter of confirmation to your school if required. You will need to speak to your school’s administrator to get the specifics of your school’s leave program.

12. Where do patients live?

A: Patients live in a structured living environment. Patients live four to an apartment (two bedroom / two bath) located approximately three miles from TRC’s treatment facility.

13. How will I get from the residences to campus every day?

A: TRC has buses to provide for all Young Adult Program patients’ transportation needs. Our experience in treating young adults shows that not having a car early in treatment supports the structure and containment needed in early recovery. With time the young adult may earn the privilege of having a car.

14. Who will be involved with my treatment?

A: Each patient is assigned an attending physician upon admission to TRC. The physicians at TRC are Psychiatrists, Internal Medicine specialists or Addictionologists. All are certified by the American Society of Addiction Medicine (ASAM). The other members of a patient's treatment team are:

Psychiatrist / Internist	Case Manager
Family Counselor	Continuing Care Coordinator
Spiritual Counselor	Clinical Associate

15. How often will I see a physician? Therapist (Case Manager)? Family Counselor?

A:

- Physician - 2 times / week (includes individual session & Dr. Fishman's weekly group)
- Case Manager – Daily
- Family Counselor – 1 time / week

16. What does the day's activities look like? – [Click here for Daily Schedule](#)

17. What groups, sessions, education is offered to help me understand the disease of addiction/dual-diagnosis?

A: Patients and their families participate in psychoeducational and psychotherapeutic groups designed to help them explore addiction and dual disorders as well as the impact this disease can have on the family.

Treatment Modalities include:

- Group therapy
- Medication management (of mood disorders?)
- Individual therapy
- Procedural learning on how to use the 12-Steps
- Psychoeducation group
- Impaired professionals issues group
- Profession-specific groups for medical doctors, dentists), nurses, pharmacists, attorneys and pilots
- Life skills
- Spirituality group
- Family therapy
- Family Program
- 12-Step recovery meetings on campus
- Relapse prevention
- Gender issues group
- Sexual Issues (Male / Female)
- Grief Group
- EMDR (Eye movement desensitization and reprocessing) for trauma issues
- Meditation and mindfulness training

18. What will I do in the evenings?

A: Evenings are times when patients:

- Attend 12 Step Meetings (on and off campus)
- Participate in Community Meetings (at the residences)
- Attend alumni groups (on campus)
- Work on program assignments
- Continue to work on socialization skills
- Read, relax, watch television or listen to music

19. What will my weekends look like?

A: On weekends, young adults will attend a group at TRC. They will also be required to attend a 12 step meeting. TRC staff will provide recreational activities and patients will have time to take care of personal needs: grocery, pharmacy, free time, treatment assignments, etc.

20. Who will be providing my meals?

A: TRC's founder, Dr. Douglas Talbott's treatment philosophy was that patients must learn to be responsible for their own lives and for their sobriety. As soon as patients are stable, they are moved to the Young Adult Program residences where they cook their own meals (along with their roommates) in each apartment. All apartments are equipped with required cooking equipment, dishwashers and washer / dryers.

21. What type of activities will be provided that are specific to the needs of younger adults i.e. physical exercise, group outings etc...

A: Bowling, sports events, museums, hiking, playing sports/games, etc. Young Adult patients may join local gym.

22. Will I be interacting with the opposite sex?

A: Yes, with staff supervision only

23. May I bring a car?

A: Our experience in treating young adults shows that not having a car early in treatment supports the structure and containment needed in early recovery. With time the young adult may earn the privilege of having a car.

24. May I bring a Cellphone?

A: No. Patients in the Young Adult Program will be given access to telephones at the treatment facility.

25. Will I be able to communicate with my friends and family? How often?

A: Patients can write letters or email friends based on the recommendations of their treatment team. One goal of treatment is keep the patient focused on their treatment and new recovery. Too much outside contact can defocus the patient.

26. How will my family be involved with my treatment?

A: Family is a very important part of the patient's recovery. During treatment, each patient / family will be assigned a family counselor who will do a detailed assessment with the patient and also with the family members to determine each family's unique needs. Then, throughout treatment, the family counselor will have weekly family counseling sessions, which can be done on the phone or in person, if the family lives locally. We also have a family support group each Tuesday evening from 6:15-7:30 for any family members who would like to attend. The patient's physician will be in contact with the family as needed to discuss course of treatment, progress and aftercare recommendations.

Sample Family Program Schedule

Time	Monday	Tuesday	Wednesday	Thursday
8:30 a.m. 9:00 a.m.	Registration Welcome-Orientation	8:45 a.m. Lecture	8:45 a.m. Lecture	8:45 a.m. Lecture
9:45 a.m.	Lecture			
10:00 a.m.		Lecture	Lecture	Lecture
11:30 a.m.	Group	Group	Group	Group
12:30 p.m.	Lunch	Lunch	Lunch	Lunch
1:30 p.m.	Lecture	Lecture	Lecture	Lecture
3:00 p.m.	Group	Group	Group	Group
4:00 p.m.		4:30-5:30 p.m. Reception	Free time with patient to include 12-Step meeting	4:00 p.m. Community Meeting/AA
5:00 p.m.	Al-Anon Meeting	6:15 p.m. Group (Spouses/SO)		
	6:00 p.m. Free time with patient	7:45 p.m. Free time with patient		6:30 p.m. Free time with patient
10:30 p.m.	Curfew	Curfew	Curfew	Curfew

27. If I am on medications, how will the medications be dispensed?

A: Medications are distributed at TRC for the patient's first week of treatment. After the first week, the patient is responsible for picking up and paying for medications at

the pharmacy themselves. Patients are given medications in weekly or monthly doses as determined to be safe by the physician.

28. What happens when I am discharged from treatment?

A: The Talbott staff will help each patient develop an appropriate aftercare plan. This may include outpatient therapy, family counseling and $\frac{3}{4}$ house living (non-TRC / outside facility). Random drug screens may be recommended. All elements are determined by the clinical team in the patient's best interest for recovery.

29. What aftercare or continuing care services are provided?

A: Physician monitoring, Tuesday night peer support group, individual therapy.

30. Will I have to live in a $\frac{3}{4}$ house once discharged from treatment?

A: The treatment team will work with the patients and their family to determine what will be the most effective plan for each patient.

31. Will I be allowed to go on Extended Therapeutic Leaves (ETL's)?

A: Yes, to set up aftercare, if returning to a home not in the local Atlanta area.

32. Will I be able to participate in Return Visits as well?

A: Yes
